

## How Resourceful Is Water?

Water is what all living things need in order to survive. The surface of our Earth is mostly covered with water, however, not all of it is consumable for humans. We have a finite amount of water on our planet and our lives depend on it.

*How can you as an Environmental Scientist design an infographic that addresses any issues with water conservation to be published on [www.kelloughscience.com](http://www.kelloughscience.com) in order to bring awareness and solutions to conserving water?*

Goal

**The goal is to plan an infographic presentation that is highly appealing to your classmates and Cedar Ridge High School. The activity needs to educate and engage the school community in an effort to help conserve water.**

Specifications

The infographic must include:

- High quality graphic design standards
- Data describing the percentage and type of water on our planet
- Explain what water is used for and where it comes from
- Describe human activities to preserve water with possible issues they may cause
- Explain and give examples of desalination
- Citing of all sources
- Present your presentation to your class in **under** 2 minutes on January 29th/30th

We look forward to your submissions and we will have a class vote on the best presentation. Thank you for promoting a positive future for your city!
